

THE MADZI ALIPO APP AND DATABASE

From **grassroots to decision makers**. The collaborative collection & dissemination of up-to-date information, facilitating water point assistance.

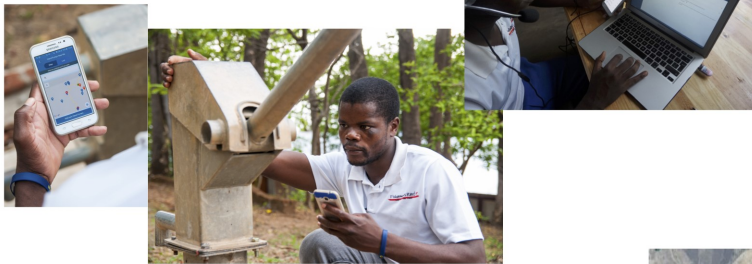

With many agencies assisting in WASH programmes throughout Malawi, it is PARAMOUNT that those involved know WHO is working WHERE and WHAT preventative measures are being implemented or proposed. Having an up-to-date image of the situation on the ground and the capacity to communicate with affected villages, will increase the speed and efficiency with which agencies and government can assist. The Madzi Alipo App and Database facilitates all of these things, working from the ground up to disseminate information and provide data to help those who need it.

BE A PART OF IT

THE MADZI ALIPO MANAGEMENT SYSTEM

Multiple agencies **COLLECT WATER POINT DATA** through surveys and a telephone call centre, data is validated and historical information securely stored.

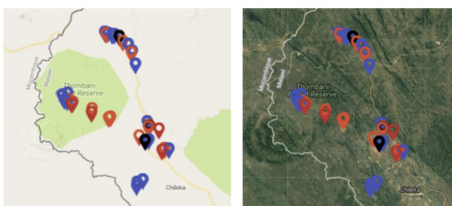

RAISING QUESTIONS:
Why is the community using the river as an open water source?

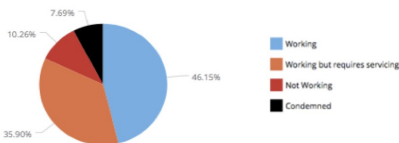

Do they have access to an alternative infrastructure for water collection?

Chikwawa Oral Cholera Vaccination: Madzi Alipo Response - Water Point Mapping support in conjunction with the vaccination programme.

DAY 1:

During the first day of mapping 39 water sources were visited around Thombani Nature Reserve. 38 of those visited were Afridev hand pumps, and the other a well. On average these water point serve approximately 182 families each.

DISSEMINATION OF DATA to government and agencies in report form. Alternatively data can be accessed and relevant reports can be generated online by the user.

THE DATABASE PROVIDES ANSWERS.

Visually analysing the water point data, the reason for the community using the river can be seen via the red pins which represent malfunctioning water points.

Thanks to the availability of this information, **ACTION CAN BE TAKEN** to locate parts, inform area mechanics and train committees in preventative maintenance and repair.
